### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 15. (Currently Amended) A system for withdrawing permeate from a liquid substrate while leaving particulate matter therein, comprising,

(a) a non-pressurized reservoir other than a shell of a module for containing the substrate;

(b) an assembly having a plurality of hollow fiber filtering membranes immersed in the substrate each membrane having a length greater than 0.5 m, the membranes together providing a surface area of at least greater than 1 m<sup>2</sup> and disposed generally vertically between upper and lower, generally cylindrical solid bodies comprised of a potting material with (i) the solid bodies having the [fibers] membranes sealingly secured therein so as to prevent the substrate from contaminating the permeate, at least a portion of the membranes spaced apart from adjacent membranes by the potting material to a center to center distance in the range from 1.2 to 5 times the outside diameter of the membranes,

(ii) lumens of said membranes being in fluid communication with a permeate pan connected to one of the solid bodies and immersible in the substrate or to a pair of permeate pans connected one to each of the solid bodies and both immersible in the substrate, and, (iii) said membranes having a length between opposed surfaces of the solid bodies, in the range from 0.1% to 5% greater than the distance between opposed surfaces of the solid bodies;

(c) a pump in fluid communication with said lumens of said membranes through at least one permeate pan, said pump operable to apply a suction to the lumens of the membranes to draw a component of the substrate as permeate through said membranes while leaving particulate matter in said substrate; and,

(d) a gas-distribution system having through-passages with openings distributed both radially and circumferentially between the membranes operable to provide a flow a gas through the through-passages to produce bubbles in the substrate.

Claim 16. (Previously Presented) The system of claim 15 wherein the length is in the range from 0.1% to 1% greater than the distance between the opposed surfaces of the solid bodies.

Clam 17. (Currently Amended) The system of claim 16 wherein the gas distribution system further includes a rigid air supply tube for carrying air to the through-passages and for spacing and positioning the lower and upper solid bodies relative to one another.

Claim 18. (Previously Presented) The system of claim 17 wherein the air supply tube has additional through-passages along its length.

Claims 19-23. (Canceled)

Claim 24. (New) The system of claim 15 wherein lower ends of the membranes are plugged.

The claims above are presented in a clean form and underlined as required for re-issue added claims.

#### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: claims 1-18 and 24 are allowed over the prior art of record. The reasons for allowance are stated on paper 4/13/10.

Patent 5, 232,593 teaches spacing potted membranes at a center to center distance between 1.2 to 5, the module is not vertically arranged. Patents 6,630,069 and 5,695,703 are also considered of interest in the art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
